Lab 2: CSS-1

Continents of The World website

Introduction

In this lab you will build on the previous lab by applying styles to the home and continent pages. A description of the requirements is given below and you should decide how to organize and apply the CSS styles.

File locations

All files for this site should be saved in a directory (folder) on your desktop named:

`~/Desktop/rocketu/labs/lab2`

Notes:

‣ In all documentation we use a forward slash '/' character as the path separator but Windows users should replace this with the backslash '\' character.

‣ The tilde '~' character is conventionally used to indicate a user's home directory (folder) - for example on a Mac this would be something like:

`/Users/nickroper`

and on a Windows PC:

`C:\Users\nickroper`

(You will already have created the 'rocketu' folder in a previous module, so you just need to create the 'labs' and 'lab2' sub-folders)

Continents of The World website - continued

Requirements

1. Copy the files from your lab1 folder into a new folder named 'lab2'.

2. Apply styles to the home and continent pages so that they are styled as follows.

3. The text color of all headings should be Dark Cyan

4. The font used for all text, including list items should be Verdana

5. There should be no bullet points on the menu lists

6. The default menu link text should be dark cyan on a light cyan background with no underline. This should also be the case for visited links

7. When the mouse hovers over the menu link text, and when the link is active, it should change to white text on a dark cyan background.

8. The link for the current page should also be styled as white on a dark cyan background.

9. Test this on a couple of the continent pages as well as the home page.

10. Try and minimize the amount of duplicated CSS code.
